ning of each regular issue of the PCT Gazette.*

(54) Title: BURNABLE MATERIAL IN THE FORM OF AN IGNITION STRIP

(57) Abstract: The present invention comprises an inflammable, single-service material assembly (1) in the form of a lighting strip (10), in a non-compacted state adapted to be able to present, after a lighting, an initial combustion with a generated amount of energy adapted for an initial lighting and a subsequent secondary combustion, for a lighting of an adjoining inflammable material (6, 6a, 6b), such as pieces of firewood formed from wood. The lighting strip (10) is, in a position intended for storing, allotted the form of a roll and has, at all events, two thin slender, elongate and co-ordinated strips (10', 10''), wound up to a compact helical shape. The lighting strip (10) is structured as and constituting of, at all events, a thin paper strip (10') and of, at all events, a thin plastic strip (10''), and that the lighting strip (10), in an unwound and non-compacted state (9), is so co-ordinated that a rapid lighting and a combustion of the paper strip (10') and the plastic strip (10'') will take place.
